

Report title

Here is the first paragraph. You will notice that I have used the `-` character to create a YAML list. Under the first list item, I have also used the `>` character which tells the parser that you plan on entering a multi-line string that is to be word-wrapped.

You can insert linebreaks wherever you want within the YAML source but new paragraphs won't be created unless you put use two new line characters.

Sub-heading

In order to create a report structure of Heading -> Paragraph -> Subheading, we have to use lists. This is because a YAML key can only have one value. A Paragraph and a Subheading coming under the top level heading is effectively two values for the YAML Heading key.

However, if you want to have a structure of Heading -> Paragraph, Heading -> Paragraph, then you can use a simple, key: value structure.

Standard content types

Bullets

- Bullet 1
- Bullet 2
- Bullet 3
 - Bullet 4
 - Bullet 5
 - Bullet 6

Ordered list

1. First Item
2. Second item
 1. Fourth item,
 2. Fifth item,
 3. Sixth Item
3. Second item

Tables

Item Number	Description	Location
12.01	There is a problem here. This report documents it.	Under the stairs
12.02	There are five ladybugs on the table cloth	Kitchen
45	The item numbers are arbitray values you structure.	This table
