

title

first topic

Here is the start of a new paragraph of text. Any text can be written Here and have linebreaks at arbitrary locations. The resulting text will be wrapped.

Here is the second paragraph of the first topic.

Her ei sa var hello Here is more on another paragrah. Here is the result

```
1 import math
2 a = 5
3 b = 4
4 c = math.sin(a / b)
```

Example

Here is the text with the results | a = 5 b = 4

```
from matplotlib.figure import Figure
fig = Figure()
ax = fig.gca()
xs = [i for i in range(1, 50)]
ys = [x**2 + x for x in xs]
ax.plot(xs, ys)
```

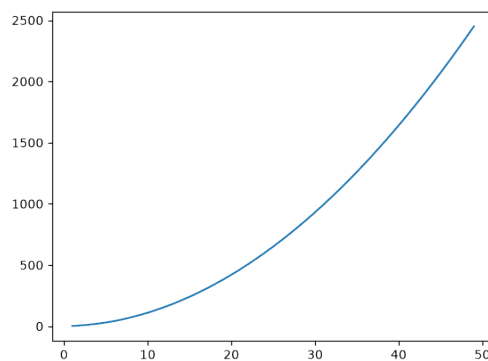

Figure 1: Here is my figure

second topic

- first bullet point. Result = 0.9489846193555862
- Here is a new bullet a = 5
- third bullet point From the vars = 5
 - subbullet 1
 - subbullet 2
 - subbullet 3
 - subbullet 4
- fourth bullet point

third topic

First sub paragraph leading into subheading

Third paragraph here.

subheading

1. first numbered item
2. second numbered item
3. third numbered item
 1. Sub item
 2. sub item

An actual topic

first sub topic

Here is another paragraph.

It has a couple of short lines in it.

The line breaks like a poem are *artistic*, like a poem.

Preformatted text

Here are some lines

of preformatted text

These really are like a poem!

fifth topic

Item	Description	Location
3.01	First problem encountered	GL A/1-
3.02	Second problem encountered	GL A/2+
3.03	Third problem encountered	GL A/3-
3.04	Fourth problem encountered	GL A/3-
3.04	Fourth problem encountered	GL A/3-
